The background features a series of overlapping, semi-transparent geometric shapes. A large, light purple shape covers the top right. Below it, a darker purple shape overlaps from the left. At the bottom, a magenta shape overlaps from the left, with a thin white line tracing its upper boundary. The word "Logo" is written in a white, bold, serif font in the upper left area.

Logo

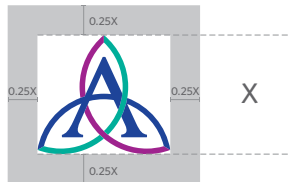

Using the logo

To ensure the logo stands out on all communications, surround it with ample clear space at all times.

The diagrams on the right depict the minimum clear space associated with each of our unified brand logo assets.

Clear space for the vertical lockup is equal to 1.5X, with X being the cap height of the wordmark "Ascension."

Clear space for the Ascension emblem is equal to 0.25 times the height of the emblem.

Clear space for the horizontal lockup is equal to 1.5X, with X being the cap height of the wordmark "Ascension."

Clear space for the Ascension wordmark is equal to the cap height of the wordmark.

To make sure that the logo elements are always clear and legible, follow the minimum sizes for print and digital shown here.

Vertical lockup minimum size
Print: 0.5" high
Digital: 60px high

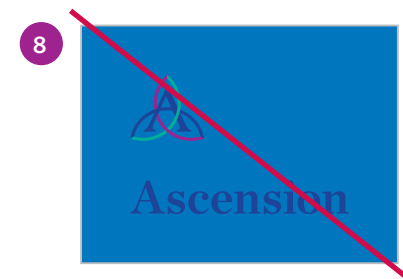

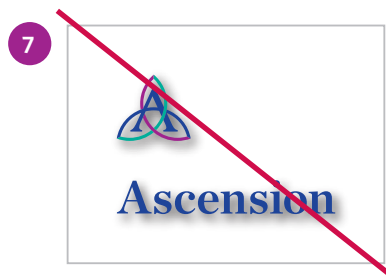

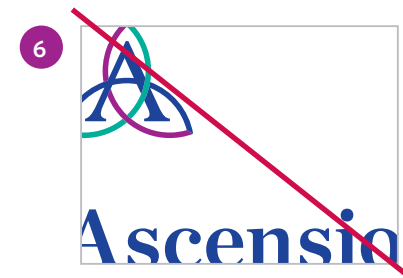

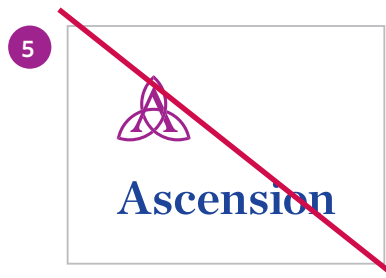

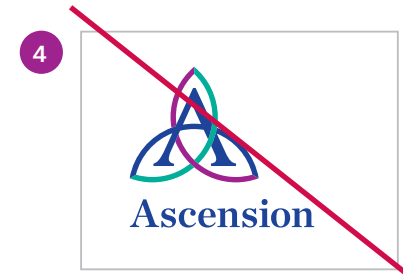

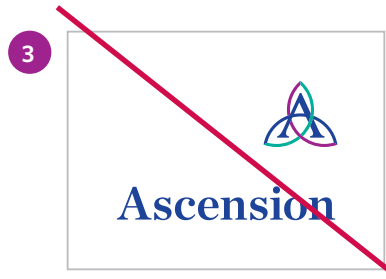

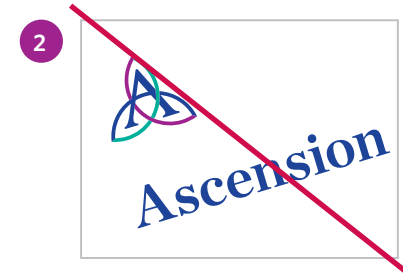

Horizontal lockup minimum size
Print: 0.25" high
Digital: 30px high

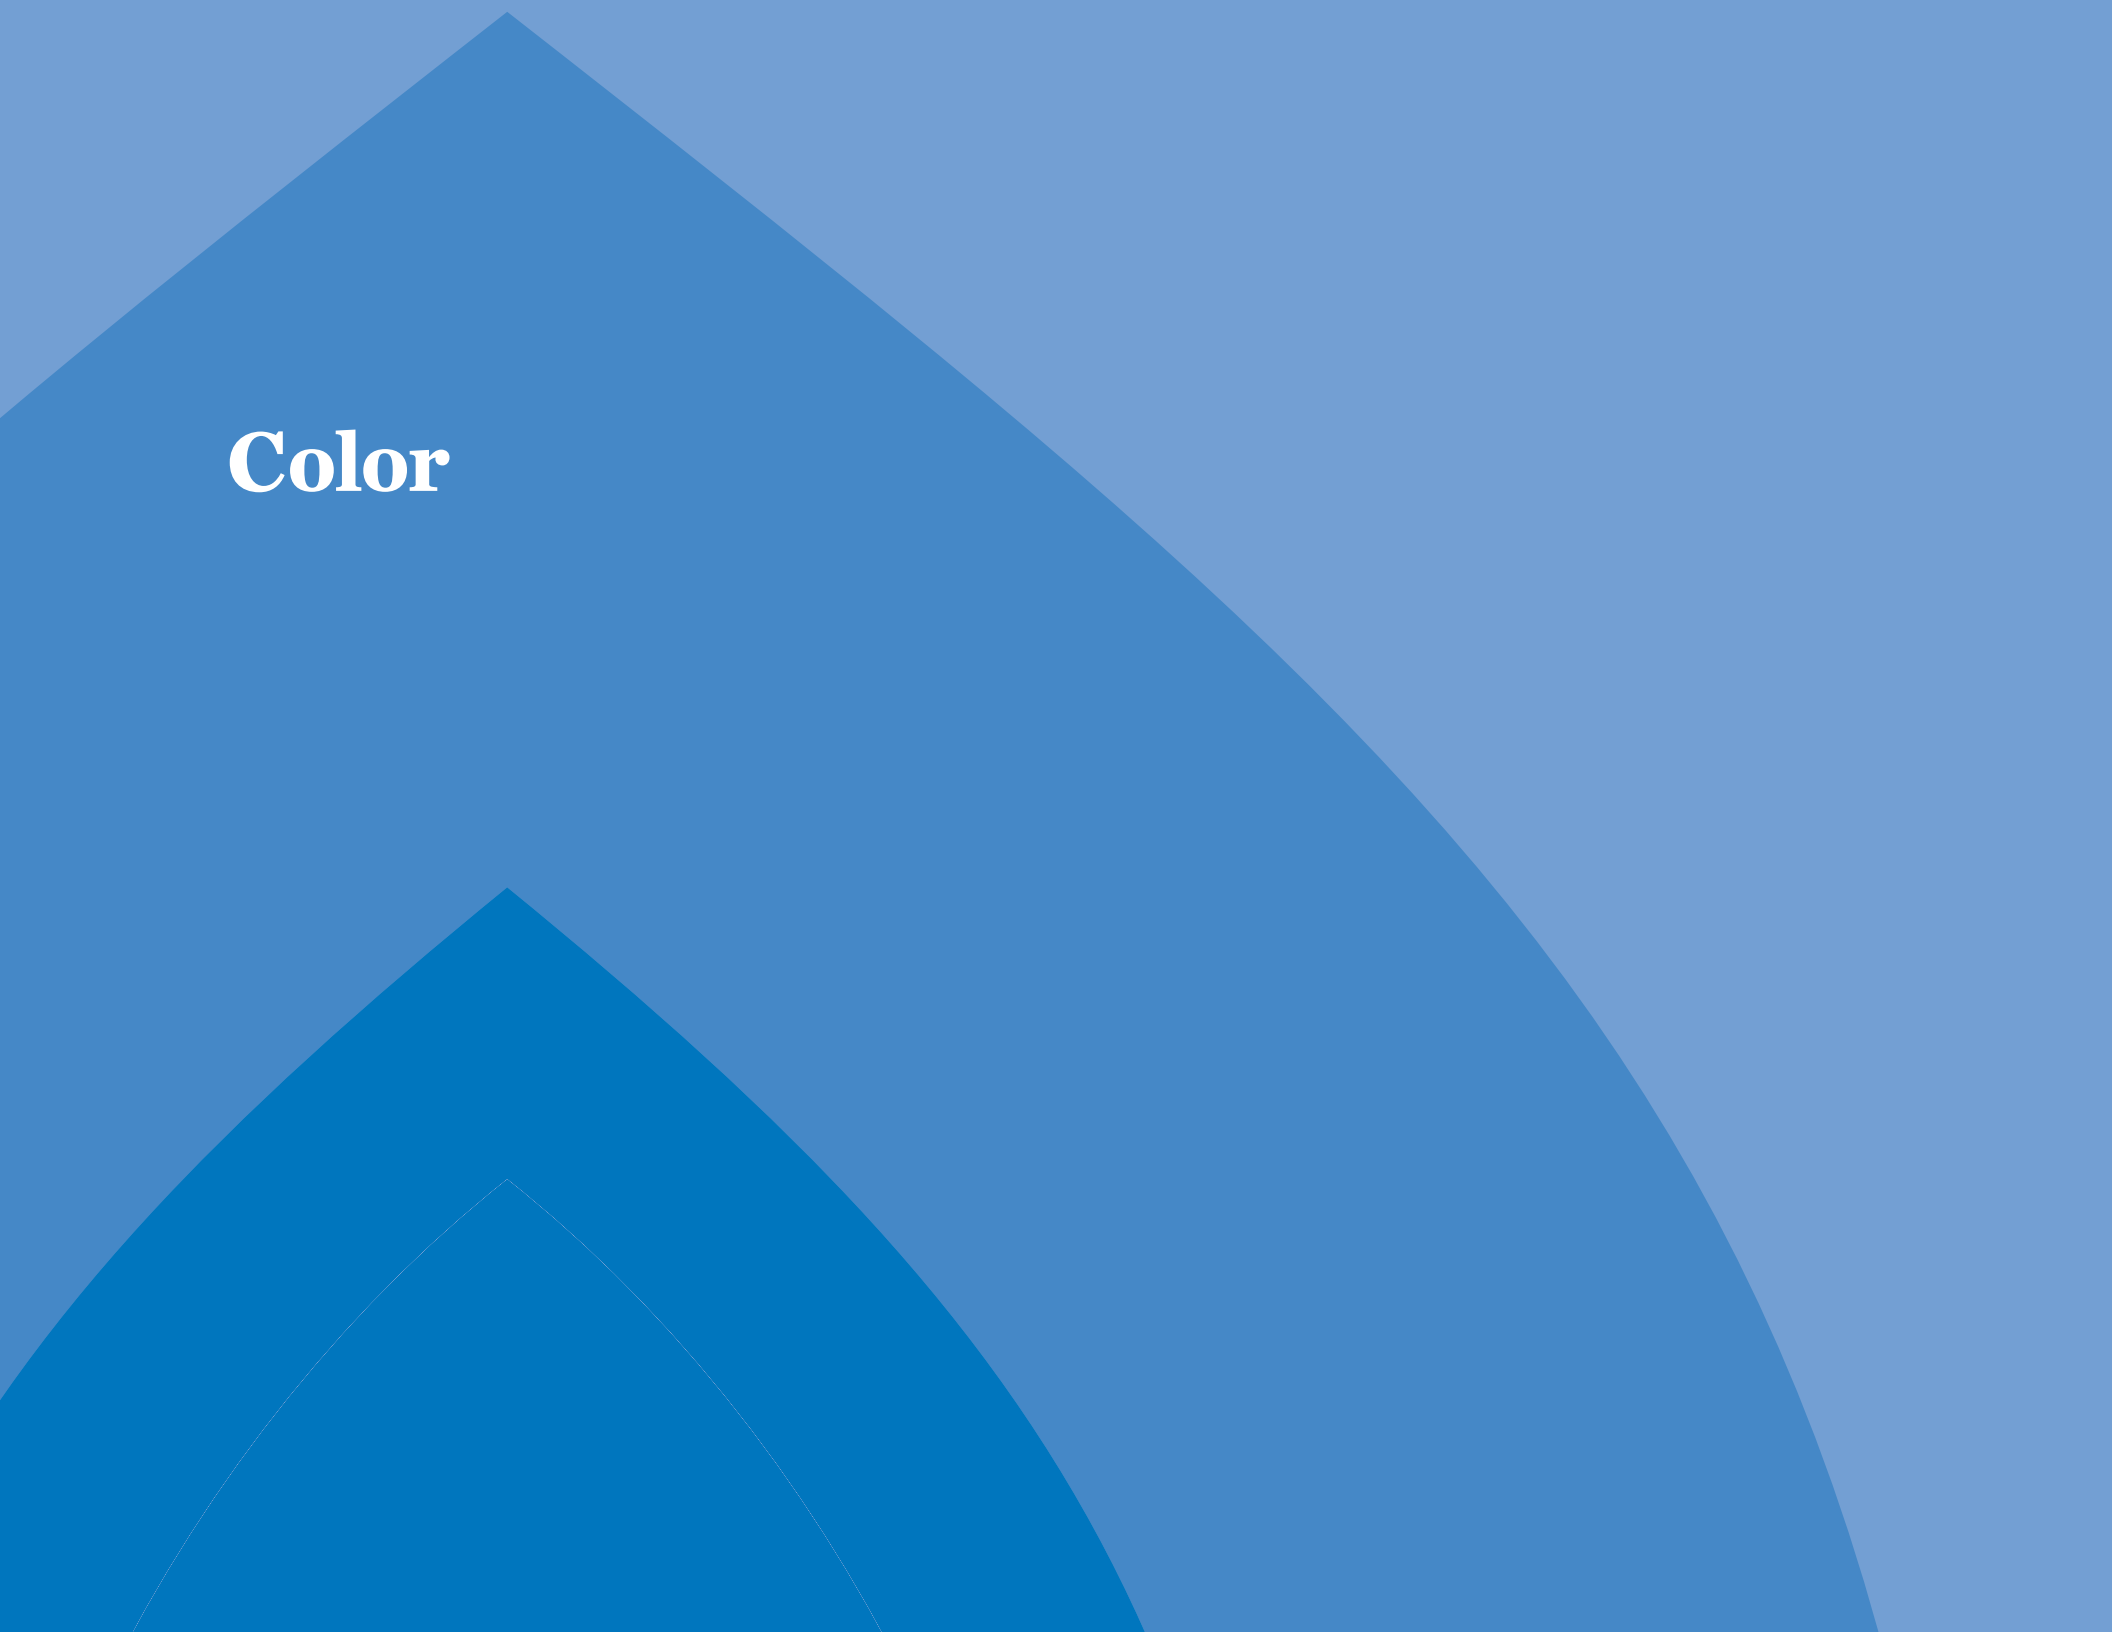

When designing digital ads, the use of any legal disclaimer can be dropped due to space restrictions on these ads. The legal disclaimer would appear on the landing page when a user clicks through.

Things to avoid

Our logo stands for who we are and should always reflect our unified, reputable organization. Following are examples of things to avoid. Refer to this page whenever using our logo to ensure consistency across our materials.

1. Don't add a department name to the Ascension logo and/or invade the clear space to create a department logo lockup.
2. Don't rotate the logo.
3. Don't change the alignment of the emblem.
4. Don't alter the size relationship between the logo elements.
5. Don't alter the emblem color.
6. Don't crop the logo.
7. Don't add a drop shadow, bevel, glow or other special effect to the logo.
8. Don't place the full-color logo on a dark background. Always make sure there is sufficient contrast between the logo and background.

The image features an abstract background composed of several overlapping geometric shapes. A large, light blue triangle points downwards from the top center. Below it, a darker blue triangle points upwards. At the bottom, a medium blue triangle points upwards, partially overlapping the darker one. The word "Color" is written in a white, serif font, positioned in the upper left area of the light blue triangle.

Color

Color palette

Our simplified color palette has five colors. The three legacy colors — blue, green and violet — are found in our logo. The medium blue and gold were added to round out and brighten the color palette.

Usage

Use Ascension Blue only in our logo and for text in headlines or subheadings. The remaining colors can be used in other graphic elements. Colors are not assigned to specific departments or service lines.

Refer to this page for the primary color specifications.

Primary palette

Ascension Medium Blue Pantone 285 CMYK: 90/48/0/0 RGB: 30/105/210 HEX: #1e69d2	Ascension Green Pantone 3275 CMYK: 90/0/52/0 RGB: 0/167/145 HEX: #00a791
Ascension Violet Pantone 248 CMYK: 42/100/0/0 RGB: 180/15/135 HEX: #b40f87	Ascension Gold Pantone 7409 CMYK: 0/31/100/0 RGB: 255/180/0 HEX: #ffb400

Web accessibility compliance

The Americans with Disabilities Act (ADA) recommends using the W3C WCAG 2.0 Level AA guidelines as the baseline for website accessibility. Guideline 1.4 Distinguishable: Make it easier for users to see and hear content including separating foreground from background.

For the typography to meet the 1.4.3 criteria, use the colors and size combinations shown below for Ascension's typography.

- Recommended minimum font size 7.5pt/10px
- Color combinations (background color to text color) denoted with an "X" should never be used
- Color combinations denoted with "LRG" must be either a font size of 14pt/18.6px and bold or 18pt/24px at a minimum

WCAG Guideline: 1.4.3 Contrast (minimum):
<https://www.w3.org/TR/WCAG20/#visual-audio-contrast-contrast>

Point-to-Pixel Converter: <https://goo.gl/bmhTTd>

Typography

Primary typefaces

Our typography reinforces our brand with two typefaces working together to make communications feel wholehearted and genuine. Consistent application of typography across brand touchpoints adds visual distinctiveness to the Ascension brand. Use these fonts for all printed communications.

Whitney

ABCDEFGHIJKLMNOPQRSTUVWXYZ
abcdefghijklmnopqrstuvwxyz
1234567890!"%&?\$

Whitney

Our primary sans serif typeface is Whitney. Use Semibold for smaller subheads and callouts and Book for all body copy.

abcdefghijklmnopqrstuvwxyz
1234567890!"%&?

The background features a light teal gradient. Overlaid on this are several geometric shapes in a darker teal color. A large triangle points downwards from the top center. Below it, a smaller triangle also points downwards. To the right of these triangles, a large circular arc is visible. The text 'Alternate arch graphic' is positioned within the upper-left teal triangle.

**Alternate
arch graphic**

Alternate arch graphic

The alternate arch graphic is derived from the Ascension master arch graphic.

Used mainly as a texture in color fields for visual interest, in applications where the full arch graphic does not fit or would add too much complexity to the design. It can be used as shown in the examples to the right.

The use of the arch as a brand asset relies on three variables:

1. Opacity
2. Layout placement using a 3x3 grid
3. Two cropping placements

Keep in mind the arch graphic is not mandatory in all creative. It should be integrated in ways that do not distract a viewer from valuable content or feel arbitrarily decorative.

Web arch used as a digital banner background

Web arch used as an email header background

Web arch used to add depth to a digital ad or graphic

Color and cropping

Color

The arch graphic can be used with the four main colors of our color palette and a progression of tints.

The progression of the color tints for the arch graphic always remain the same: 100% background color, 10% opacity white arch.

Cropping

The arch always bleeds off the left or right side of the color bar.

There are two options for cropping the arch. Arch 1 is a sharper angle and is better used for more horizontal layouts. Arch 2 is a more gradual angle, with more curve showing, better used for more vertical formats.

Arch 1: Horizontal cropping style

Arch 2: Vertical cropping style

100% tint of color

10% opacity white arch

100% tint of color

10% opacity white arch

100% tint of color

10% opacity white arch

100% tint of color

10% opacity white arch

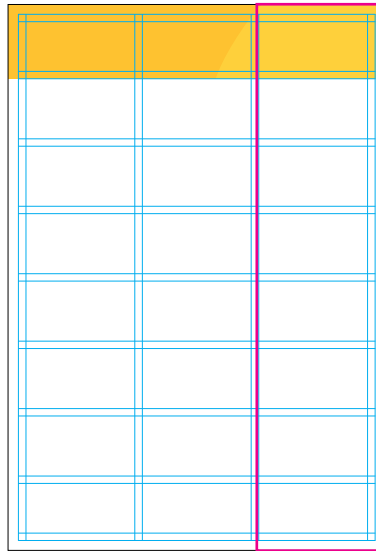

Placement

The arch is always contained within a solid colored rectangle. It follows the 1/3, 2/3 column grid rule established within the three-column grid.

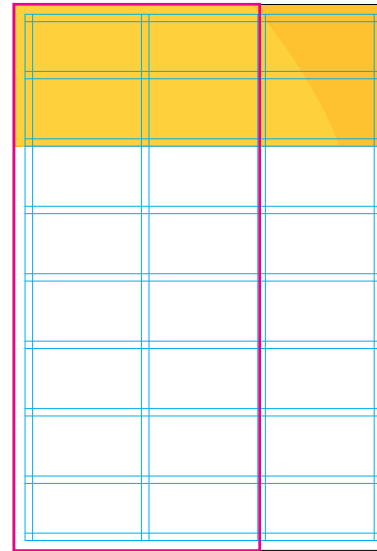

Using the three-column grid

Our system uses a three-column grid based on document trim size. The arch should fill most of a 2/3 to 1/3 ratio, or a 1/3 to 2/3 ratio as examples show to the right.

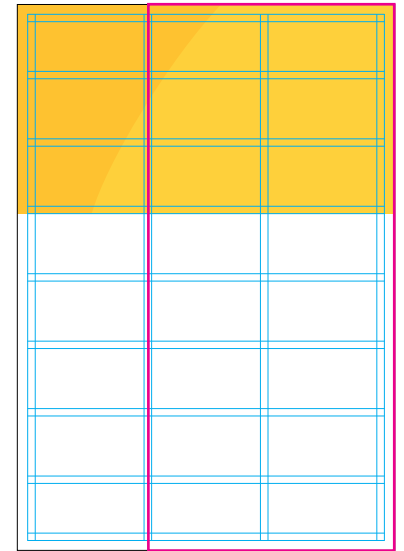

1/3 placement

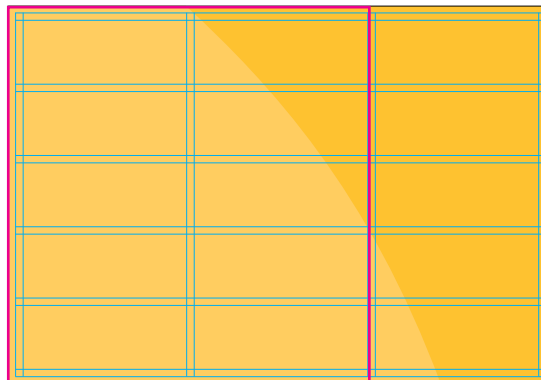

2/3 placement

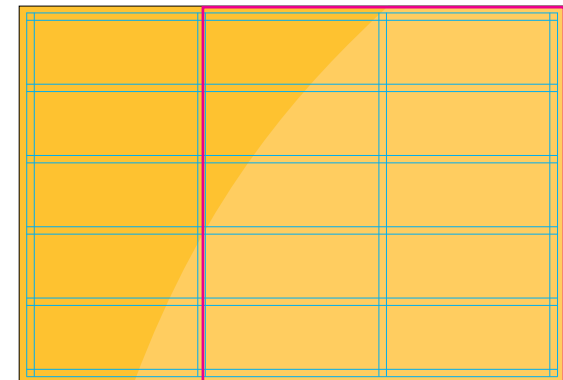

3/3 placement

2/3 placement

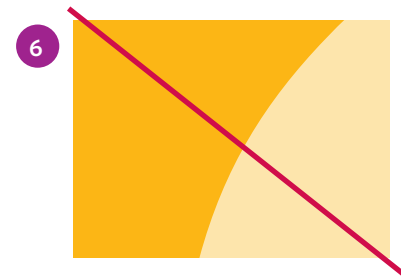

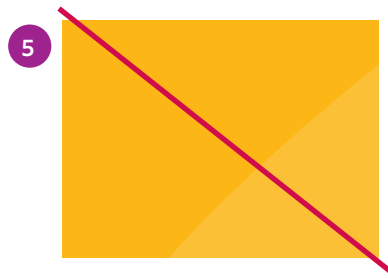

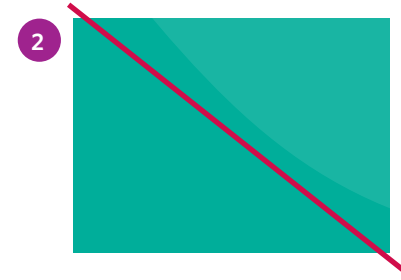

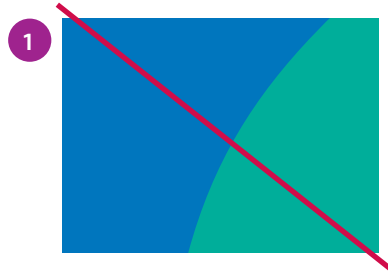

2/3 placement

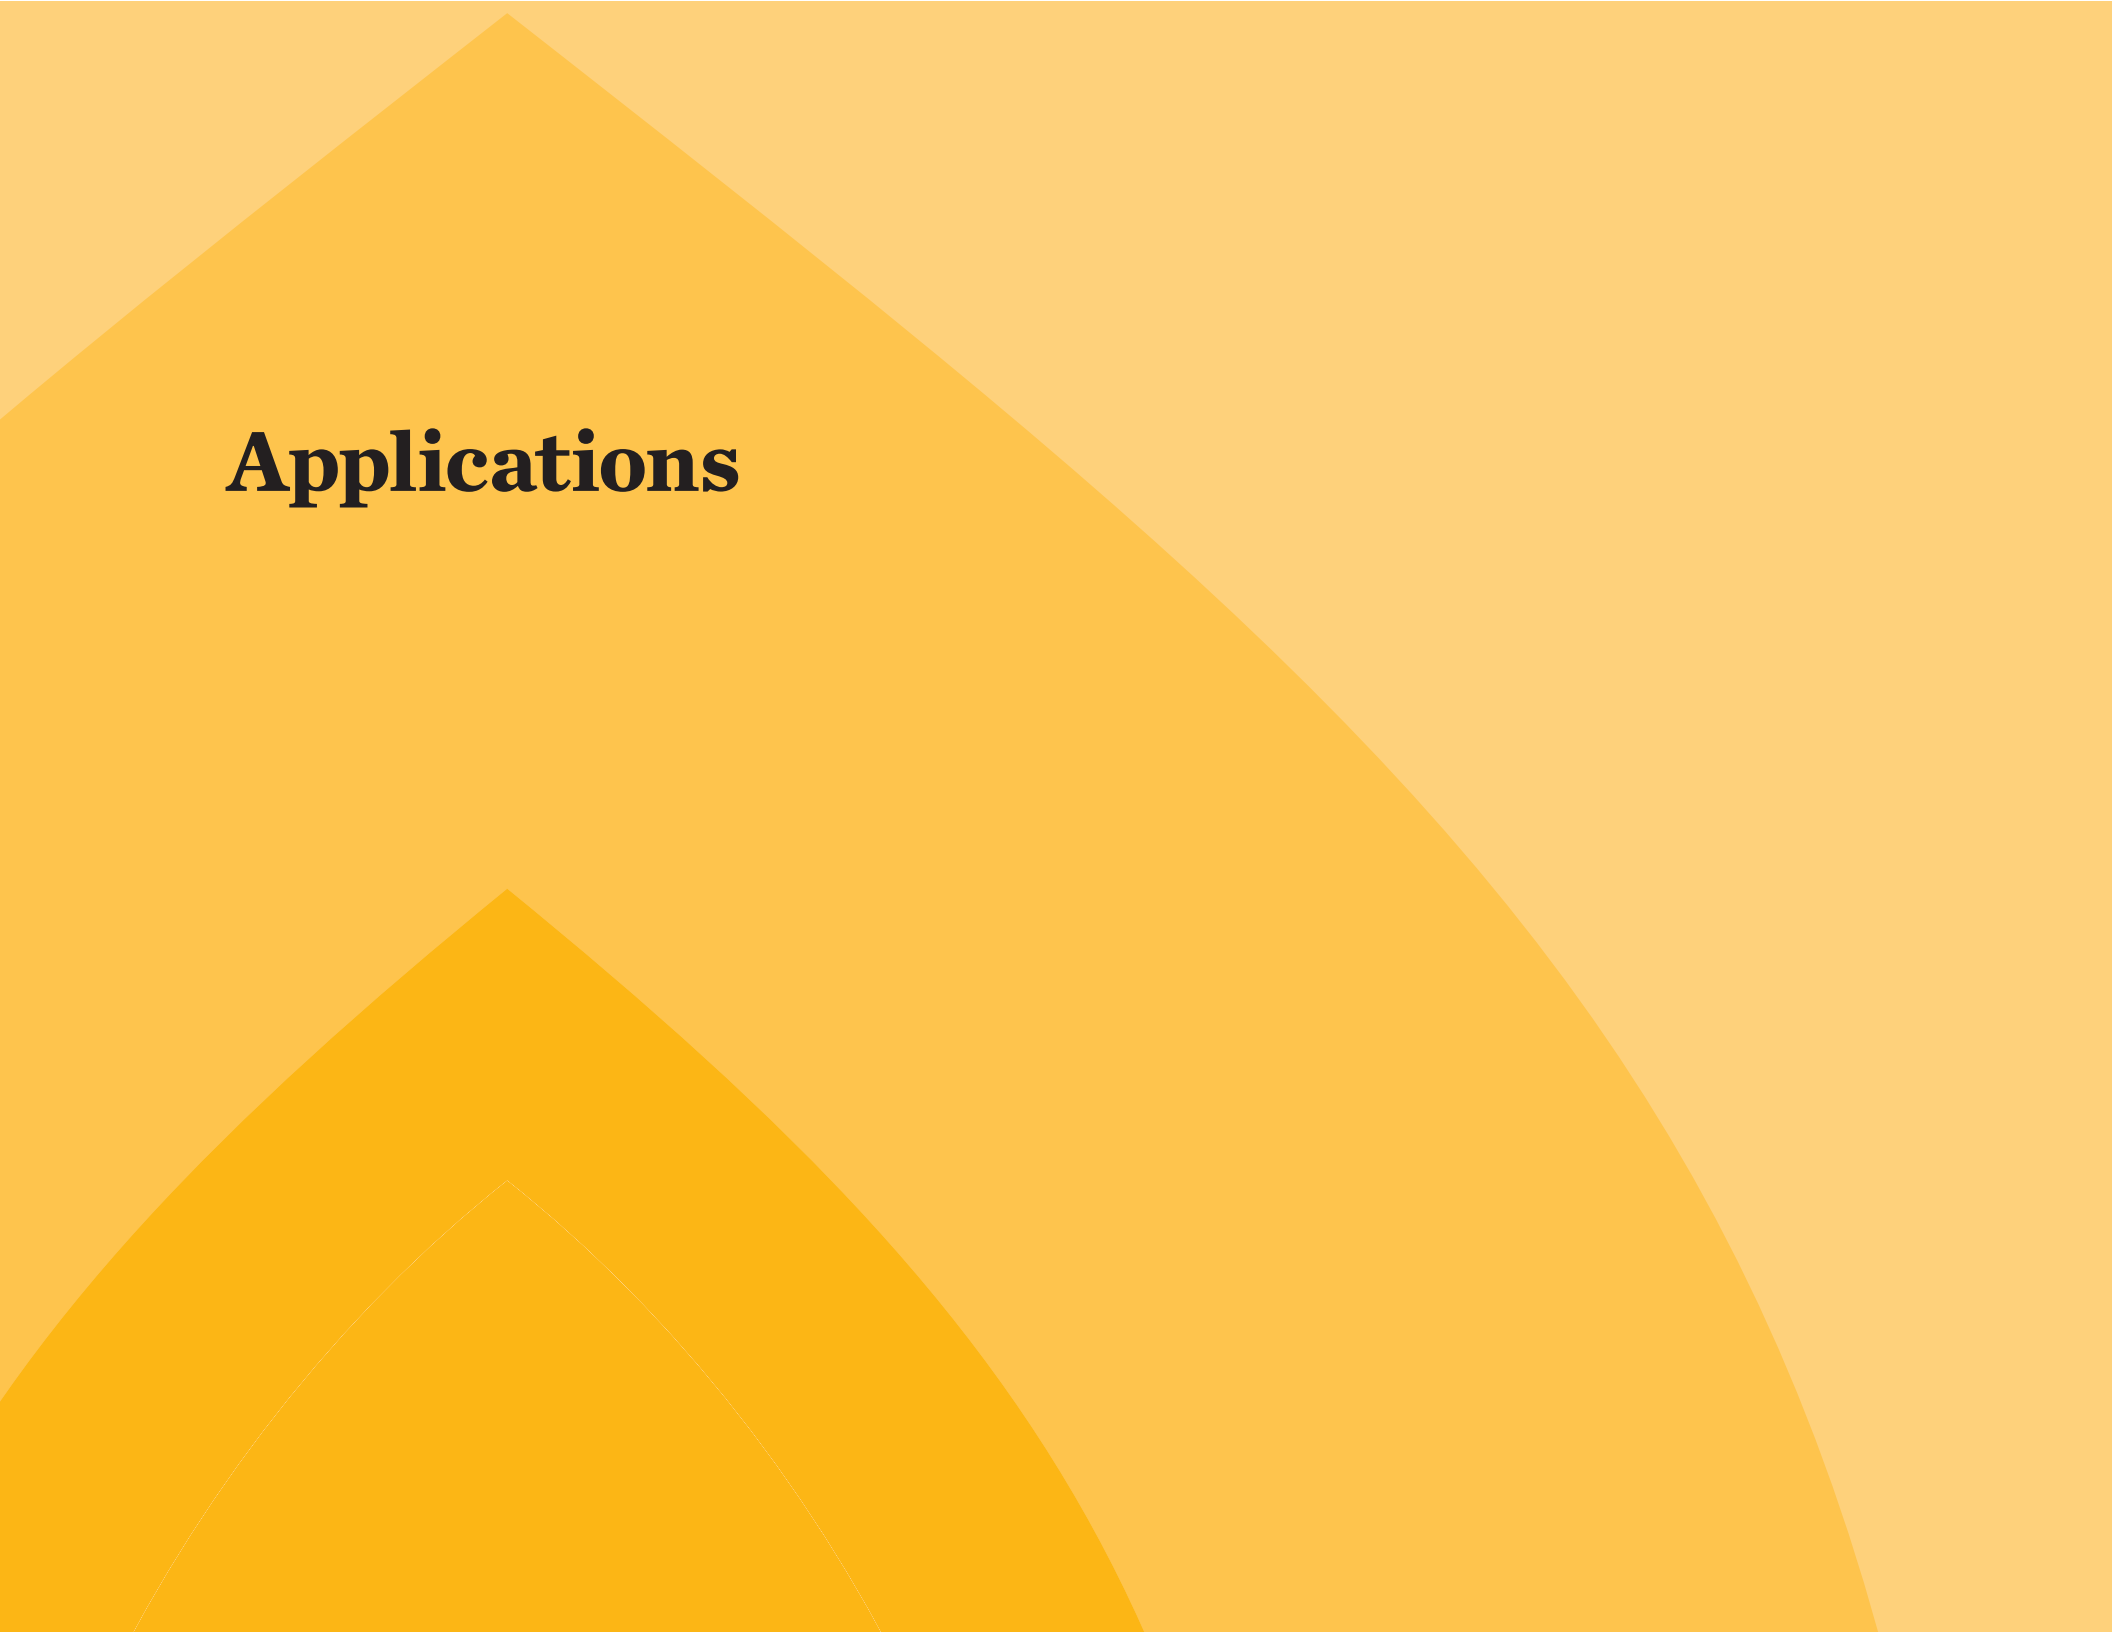

Things to avoid

Do not use the arch graphic in an unapproved manner. Some examples of uses to avoid include:

1. Do not use more than one brand color.
2. Do not rotate the arch graphic.
3. Do not use a color as a tint over photography or other visual elements.
4. Do not use the arch shape as a mask for photography or other visual elements.
5. Do not scale up so that the curve is flattened.
6. Do not use change the opacity of the overlay.

The background features a series of overlapping, semi-transparent geometric shapes in shades of yellow and orange. These shapes are primarily triangular and trapezoidal, creating a layered, mountain-like effect. The colors range from a light, pale yellow to a vibrant, saturated orange. The word "Applications" is positioned in the upper left area, within one of the yellow shapes.

Applications

Standard display ad package: Static

Specifications

Each display ad project should include all six sizes at right. Additional market-specific sizes may be specified in Creative Service Request.

Border

1 px width minimum. Color must be distinguishable from ad and page background. Light grey preferred.

Background

Cannot be transparent

Market disclaimer

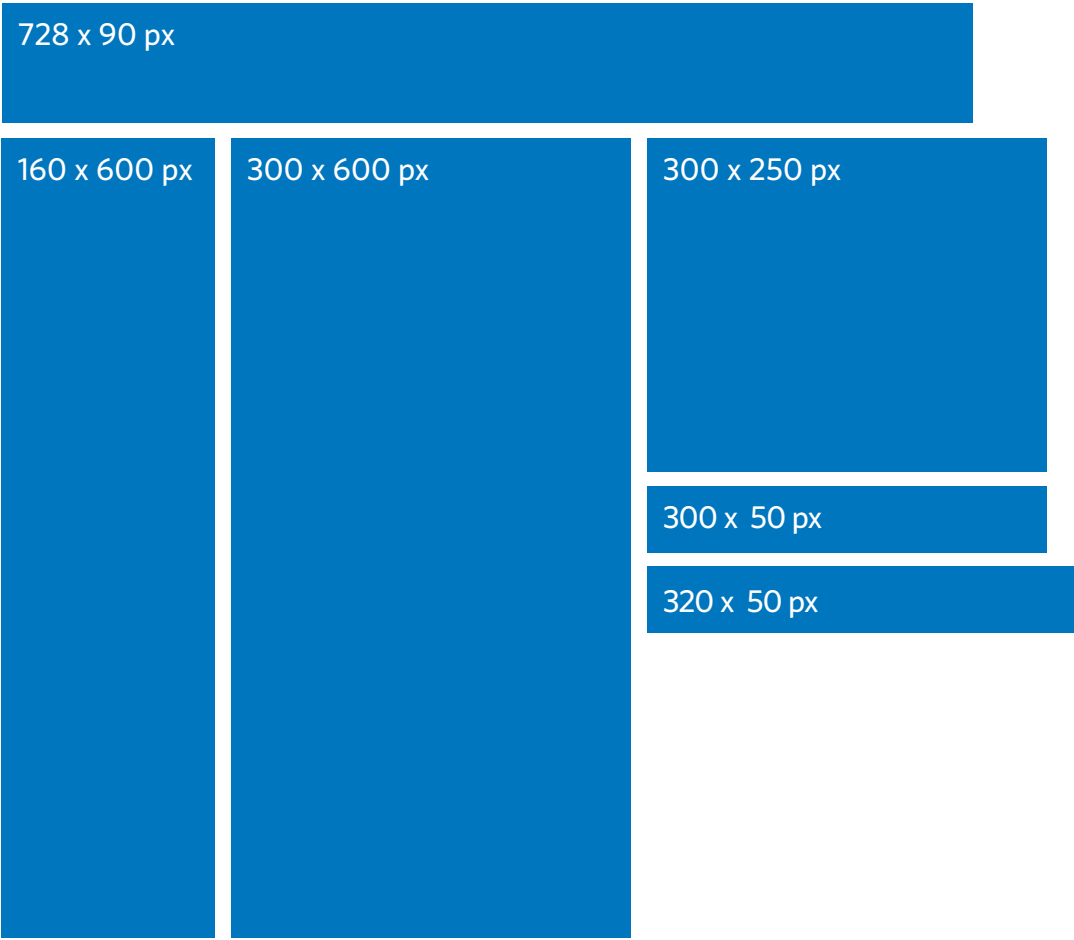

Not required

File formats

- JPG or PNG: 150KB max. file size

Packaging files

- Must include a default static JPG for each size. 120KB max. file size. Use Ascension logo for branding default file; does not need to be versioned by market.
- Follow filenames conventions on page 22
- Files should be separated by ministry market. Each market folder should include all sizes and backup images.

[Reference full display ad specs on Google Drive](#)
when creating static, animated or HTML5 ads.

Standard display ad package: Animated

Specifications

Each display ad project should include all six sizes at right. Additional market-specific sizes may be specified in Creative Service Request.

Storyboard design for approval prior to animating ads to avoid unnecessary animation work.

Border

1 px width minimum. Color must be distinguishable from ad and page background. Light grey preferred.

Background

Cannot be transparent

Market disclaimer

Not required

Animation

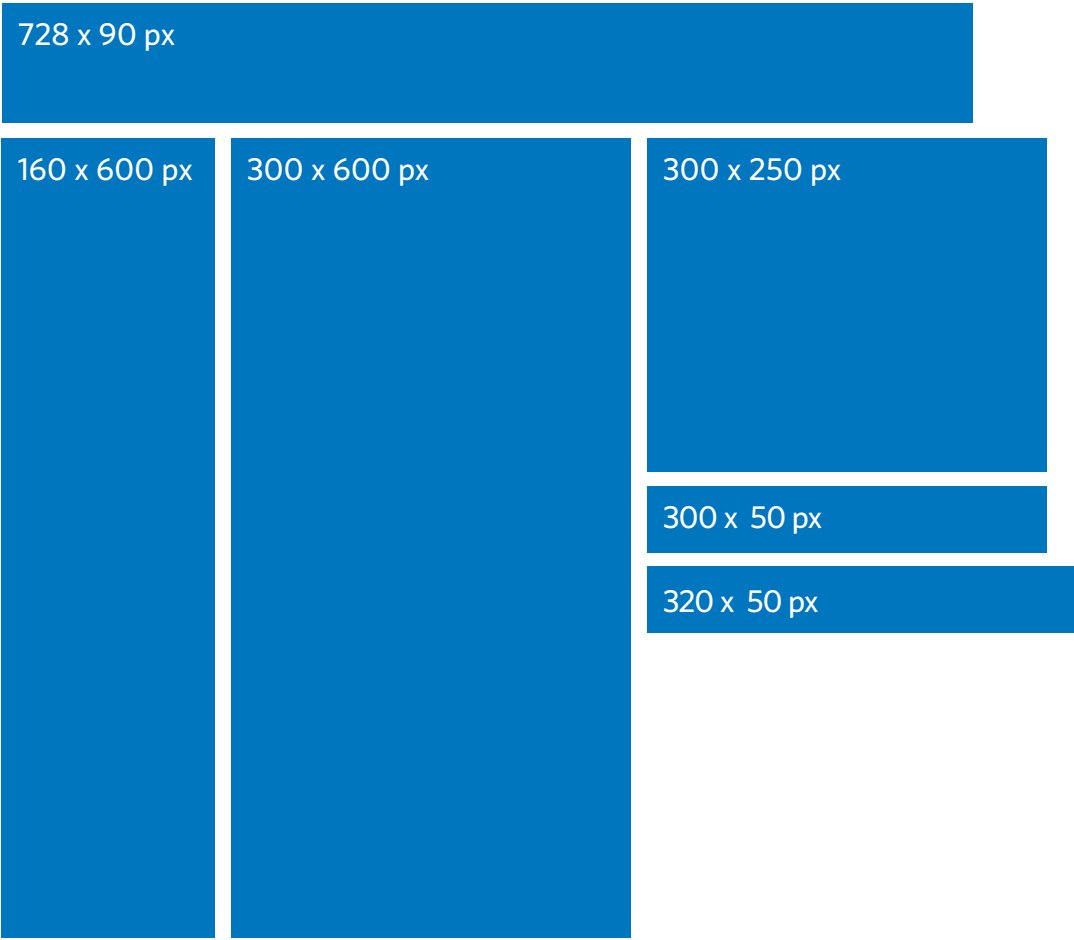

15 seconds maximum: one loop (not forever) or 3 loops totaling 15 seconds. 24 fps max.

File formats

- GIF: 150KB max. file size
- HTML5: 150KB max. file size for ZIP file. See page 21 for additional specs.

Packaging files

- Must include a backup static JPG for each size and each market version. 120KB max. file size.
- Follow filenames conventions on page 22
- Files should be separated by ministry market. Each market folder should include all sizes and backup images.

Animated display ads: HTML5 specifications

HTML5 animated ads should be built in
Google Web Designer:
webdesigner.withgoogle.com

Storyboard design for approval prior to animating
ads to avoid unnecessary animation work.

Specifications

150KB max. file size for ZIP file
containing all assets combined

Keep ads at 30 seconds or less.

100 files max. (including backup files):
Compressed .zip with HTML, HTM, JS, CSS, JPG,
JPEG, GIF, PNG, JSON, XML or SVG files only

Dimensions

160x600 pixels
300x600 pixels
300x250 pixels
728x90 pixels

Best practices

- Use the smallest images possible to reduce ad weight.
- Include one exit event in your HTML file — limit one per ad (not the same as click tag; Tap Area > Touch/Click > Google Ad > Exit ad). You may provide a landing URL with an exit event but it is not required.
- Click-out URL must open in a new browser window.
- Ensure there is a valid SSL certificate in place for all URL calls other than the click-out URL. Verify the https:// protocol has a closed lock next to the URL.
- Use Google fonts Frank Ruhl Libre and Roboto to decrease file size
- Use Google Web Designer's built-in Ad Validator to check for common errors.
- There are several options for publishing ads. Google recommends using the publish locally option.

Things to avoid

- Do not include "%" in file names.
Restrict all file names to 50 characters or fewer.
- Do not loop ads indefinitely.
- Do not include JS, CSS or any files that are not referenced by the HTML file in your ZIP file.
- Do not use local or session storage for HTML5 assets

Packaging files

- Static backup image: Create a static backup image that will be served in place of your animated ad in the event that creative assets aren't supported by a particular browser or platform. Treat this image as a static display ad (headline, CTA, logo). Must be included for each size and each market version. A system-generated blank image will be served if you do not provide a backup image.
- HTML5 ad: Create a locally-published HTML5 folder which includes an index.html file and images. This folder should be zipped and submitted separately from the static backup image. The ZIP file is your final to be loaded in Google Campaign Manager.
- Save components for individual ad sizes into separate ZIP files, including a separate file for the backup JPG or GIF image.
- The creative file and the published ZIP file should have the same name and follow filenaming conventions on page 22

Filenaming standards for display ads

Naming of final display ad assets uses a unique structure which differs from standard Lytho project naming. This creative naming structure has been adopted to ensure accuracy in reporting and tracking of service-line-level messaging that feeds into Salesforce.

Usage

- All details (including hyphens, spacing, static or animated notation, as well as where testing and version differentiators appear in the descriptor) are essential to ensure accuracy and efficiency for reporting
- Descriptor structure is determined based on whether the ads are simply versions of creative or if testing/reporting against creative is needed
- Do not include file extension (.jpg/.png/.gif) in the filename. The media team will remove the file extension before they upload files for trafficking.

Naming structure, including personas

JobID-YR-Ministry Code-Service Line-SubService Line-Persona-Descriptor-Medium-Unit Size

JobID-YR	Six-digit Lytho project number, followed by two-digit year
Ministry Code	Ministry abbreviation (ALBIR, KSWIC, WIMIL, etc)
Service Line	Service line abbreviation (BRD, ACC, PED, etc)
SubServiceLine	Secondary service line abbreviation
Persona	Persona designation (list as GEN if specific persona is not included)
Descriptor	Condensed Lytho project name (indicate static/animated and version/test here)
Medium	This will always indicate "Display"
Unit Size	Dimensions of creative asset, height x width

Descriptor structure examples

Standard creative — single version:

Buttons

Follow these specifications when creating call-to-action buttons for emails or display ads.

Color

Primary button color is Ascension medium blue. A white or outline button is used over a full-color background. Violet fill may be used as a high-emphasis color in limited cases.

Type

Use Whitney Semibold in all-caps with 1.25px letter spacing. Type should be set in the same size as body type and center-aligned within the button shape. See pages 12-13 for font alternates.

Shape

Button shape is rectangular, with a 4px corner radius. Outlined buttons use a 1px border.

Alignment

Buttons should normally be left-aligned within a layout. Center alignment may be used in some cases.

Padding

Padding inside button should be at least the same height as button type.

Buttons over white backgrounds

Filled button

Outlined button

Arrow button

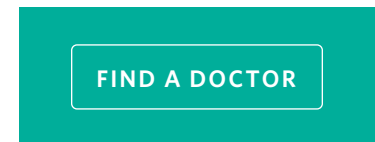

Buttons over color backgrounds

Social media mastheads

Facebook, Twitter and YouTube

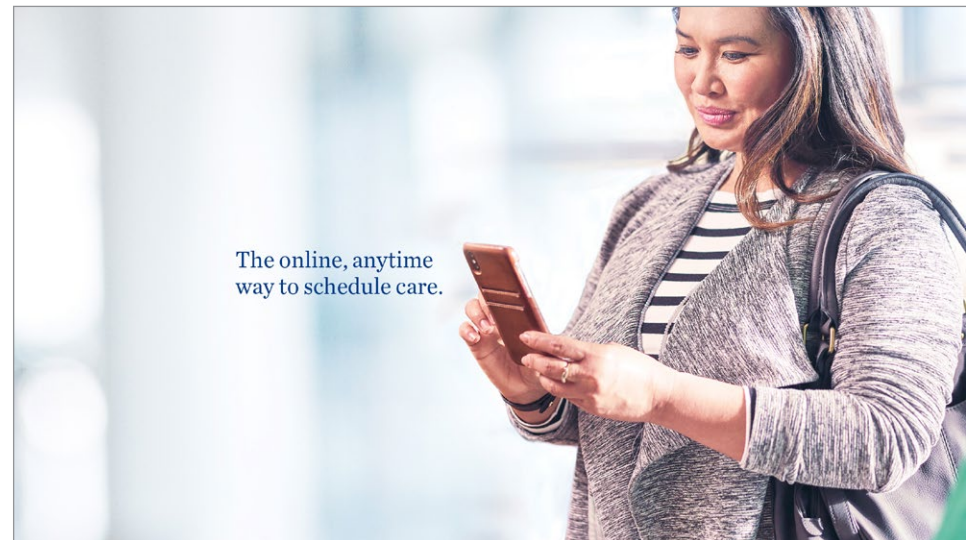

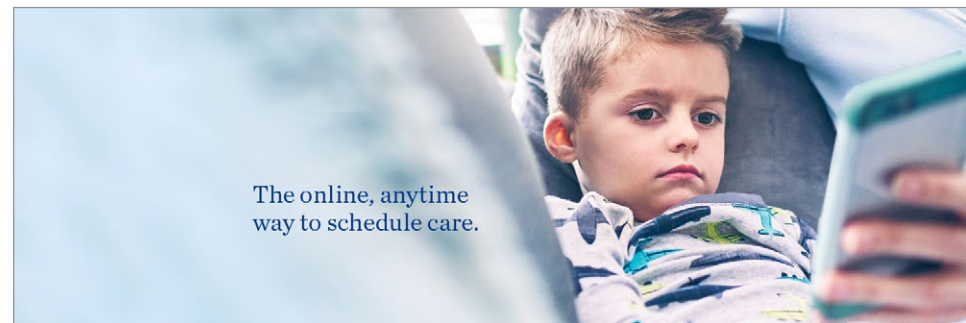

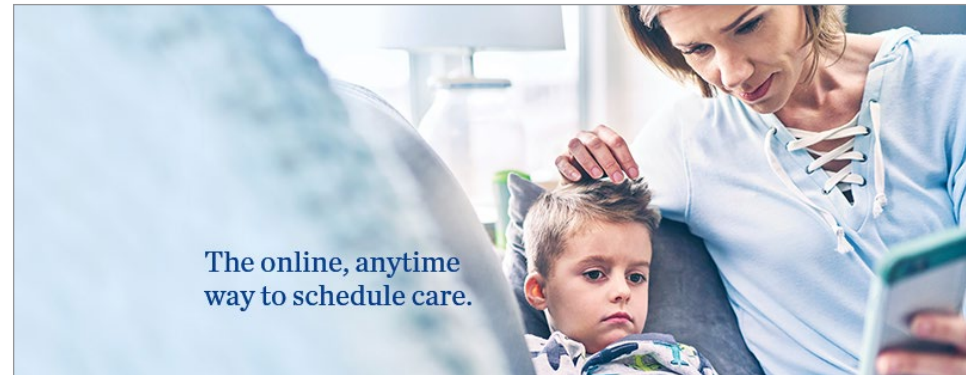

Always up-to-date sizes, file types supported, and maximum file sizes for each channel available here:

https://drive.google.com.us/cas.ms/file/d/1ZZYu8ucLnFOWib9W1r3FZrcP8t_xTu3E/view

- Use full frame photo whenever possible; limit other elements
- No logo necessary — logo is in profile picture next to masthead (sometimes overlaps)
- Keep final files to 1 MB or less

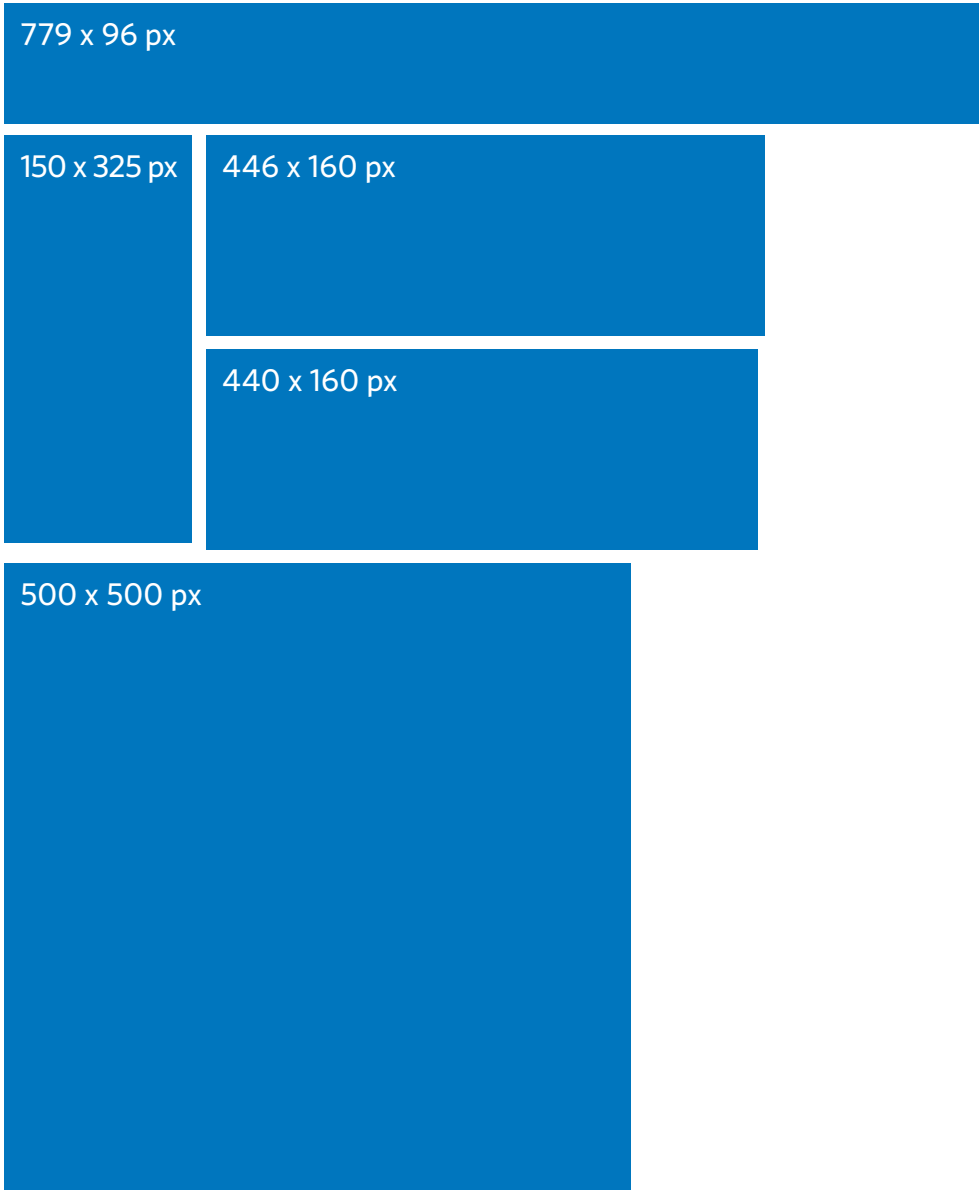

Make it work for desktop and mobile

- **Facebook:** <https://louisem.com/52407/facebook-cover-photo-mobile-template>
- **YouTube:** <https://louisem.com/wp-content/uploads/2014/06/YouTube-Channel-Art-Template.jpg>
- **Twitter:** <https://louisem.com/4598/twitter-header-size-template>

Intranet banners

Intranet banners are used on various platforms across Ascension. These banners are often requested as part of a campaign or communications tool kit for internal programs and associate-led initiatives.

myAscension carousel image

This banner is displayed on the homepage of myAscension at my.ascension.org. The left section of the image (200x274px) will be overlaid by a violet color box and type. Image tonality should avoid light grey so as not to blend in with the web page background.

File size should be 100 KB or less.

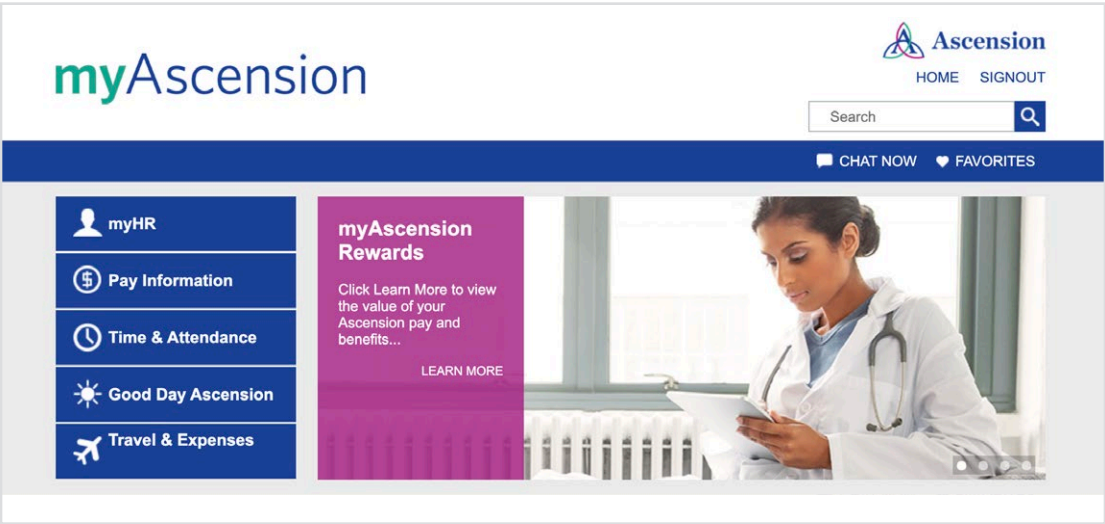

Photo requests from digital team

Overall size

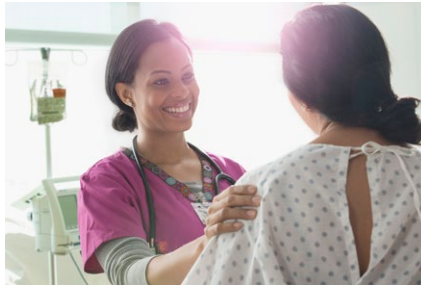

The “medium” size on Getty contains enough resolution to work with; extra-large files are not needed.

Responsive ads: Need something that can be cropped both wide and square, so it helps to have some negative space in the photo.

Social campaign photography: Image size on a Facebook ad is 1200px x 628px, and 1200px x 1200px square so the photo will need to work for both sizes. No more than 1 MB in size.

Web photography

For banner ads on the web, wider is always better, with negative space on the sides. The subject of the photo should not be at the end, cropped off the side, because that greatly limits placement. Sometimes, words need to be added to the banner images, so adequate negative space is very important.
