

Dynamic Documentation Enhancements Workspace Job Aid

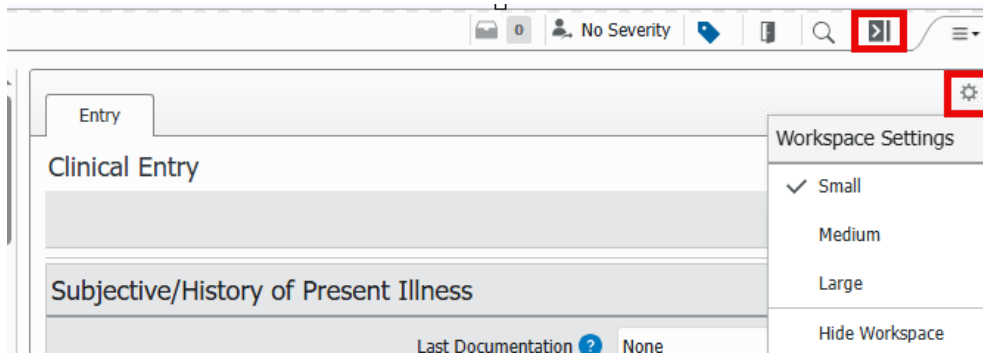

Overview: This quick guide introduces the new Workspace functionality within Cerner workflow pages. Beginning November 20, 2025, updated Dynamic Documentation and Charting components will be available directly within your workflow pages. (This enhancement does NOT include PowerNote)

On that date, the new Workspace will be automatically enabled for all providers. These documentation boxes are now located exclusively within the Workspace. These options will no longer appear separately in your workflow menu.

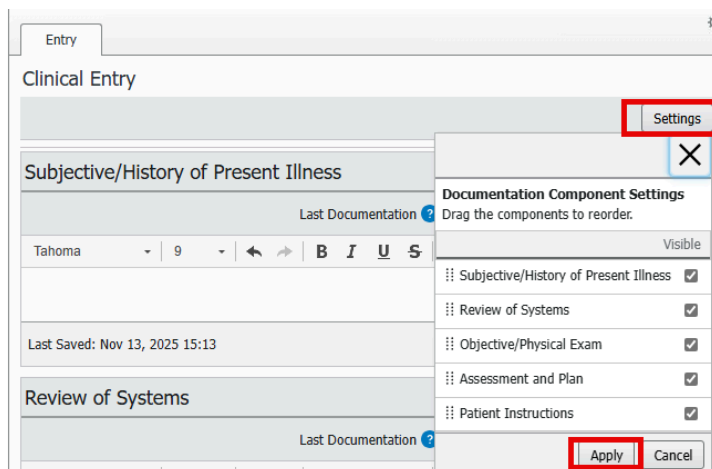

[Video: Dynamic Documentation Enhancements Go Live 11.20.2025 \(6:19\)](#)

Workspace Uplift - Initial Setup

1. To change the size of the Workspace view, select **Settings**  in the upper-right corner of the Workspace, and then select **Small**, **Medium**, or **Large**. Alternatively, drag the divider between the Workflow components and the Workspace view to the width you want.

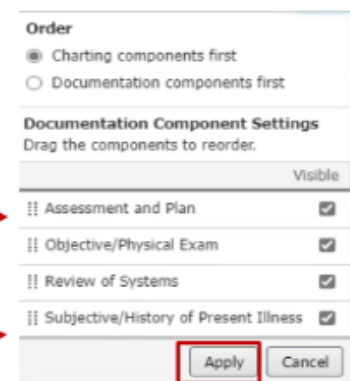

2. Select **Toggle Workspace**  on the MPages ViewPoint toolbar to hide or show the workspace pane. The system displays the Workspace view in a pane to the right of the mPages components.
3. Click on **Settings** to put the Documentation Components (for use in DynDoc notes) first. You can also arrange the order you want the components to be in. Be sure to click 'Apply' to save.

Order (forms vs Dyn Doc components):
Can change sequence: Display Dyn Doc components before Forms

Dyn Doc components sequence:
Drag and drop to change (eg, move HPI 1st, then ROS, PE, AP)

Last Documentation Pull Forward & Template Switching Functionality

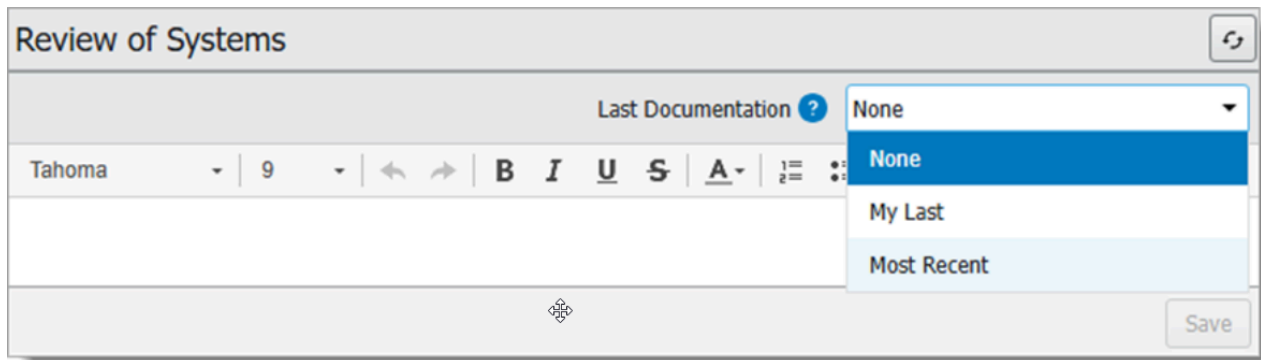

You will now be able to:

- Choose to pull in either **Most Recent** or **My Last** documentation into designated components.
- Choose to switch templates that support the preferred view of **active orders** within the **Assessment and Plan** component.
- Look back time is 180 days

This enhancement allows information entered by providers to be easily reused, improving efficiency and continuity of care!

New features:

Documentation Components: From within **any** of the documentation components, there is an option to pull forward documentation.

NOTE:

- **None:** Does not pull any documentation forward for that component. This is the default setting for all components.
- **My Last:** Pulls forward documentation the current user last charted for that patient in that component.
- **Most Recent:** Pulls forward the most recent documentation done by any user for that patient in that component.

Assessment and Plan: The Assessment and Plan documentation component can pull forward documentation from both the diagnosis and/or the comment box at the bottom. Previously documented information will pull in based on the template selected.

Last A&P	Template
None: Does not pull any documentation forward for that component. This is the default setting for all components. My Last Problem: Pulls forward problems the current user last charted for that patient in that component. Most Recent Problem: Pulls forward the most recent problems done by any user for that patient in that component. My Last Comment Box: Pulls forward comments the current user last charted for that patient in that component. Most Recent Comment Box: Pulls forward the most recent comments done by any user for that patient in that component.	Assessment and Plan - standard template Diagnosis Only - no orders pull in Inpatient - pulls in active orders within the last 12 hours Outpatient - pulls in active orders within the last 48 hours

When adding the options of **My Last Problem** and **Most Recent** in the components this screen will display.

Caution

Text conflicts in Objective/Physical Exam

You have existing documentation in the component.

Append will add your Last Documentation choice to the end of your existing documentation.

Replace will remove your existing documentation and replace it with your Last Documentation choice.

How do you want to proceed?
