

Patient Status/Level of Care Orders

Authored by Oklahoma Clinical Informatics

Overview: Provider Status Change/Level of Care Orders (PSO) assists with “Order Driven Billing”, based on the **Status** and **Level of Care** of the patient.

IMPORTANT! “Level of Care” defines what the hospital can bill! **The goal is to decrease denials through clinical definition and accuracy of patient status and level of care.**

Available Status Change/Level of Care Orders

NOTE: There are several status change options available when placing “Patient Status Orders” which also include “Patient Status Change Orders” “Admit Status Orders” (ASO) & “Discharge Status Orders” (DSO).

IMPORTANT! A Patient Status Order (PSO)

- Simplifies the ordering process based upon patient scenarios
- Simplifies order entry and eliminates inadvertent changes to the status, expected time of hospital care, and level of care
- Aids nursing to communicate transfer needs within the provider’s ordered Level of Care
- Send appropriate notification to Registration/Admissions and the Room Control/Patient Logistics Center (PLC) for movement of patients.

NOTE: Provider will place Patient Status Orders in addition to appropriate PowerPlans for the patient’s inpatient stay.

1. Navigate to the **Orders** component of the patient chart to bring the **Order Profile** screen in view. **Orders** are grouped by **Activity Type**. Review current orders before adding others.
2. Click on **+ Add** to select the appropriate **Patient Change, Admit or Discharge PSO** from the main menu.

PATIENT STATUS CHANGE ORDERS
