

On January 1, 2020, House Bill 2931 went into effect, which requires that ALL Controlled Substances (Schedule II through V) be electronically prescribed. Follow the steps below to Prescribe controlled substances from Cerner .

Steps to ePrescribe

Step	Action	Visual
	Add order	
2.	Switch category to “Discharge Meds as Rx.”	
3.	Search for order	
4.	Verify the pharmacy with the patient. - The Preferred Pharmacy should default in the Send To field. - If there isn’t a pharmacy selected click “Find Pharmacy” - If you want to change the pharmacy click ...	
5.	Complete the Order Details and Sign .	
6.	The Electronic Prescription Preview window will display. Place a checkmark in the box next to each medication and sign.	
7.	Enter network password in the Confirm your identity window.	
8.	Approve the push notification sent to your device. - You may also Approve on an Apple Watch. - If the push notification has expired on your device, or you have the feature turned off, you will get the Confirm your identity window, asking for an Imprivata Token Code.	

Scheduled IIs - APRNs & PAs

In Oklahoma, Advanced Practice Providers (APP) cannot send prescriptions for schedule II substances.

- They can begin electronically prescribing schedule III through V, which will go directly to the pharmacy.
- They can start a prescription for scheduled II, right click and change it to a "Proposal", enter a physician's name which will route the prescription to the message center for the provider to complete. The Rx will NOT route until signed by the physician for schedule II Rx's. The job aid details how this is done.
